MAX DOGGO

Date of birth:	place-your-own
Location of birth:	place-your-own
Date issued:	27.08.2025
Passed Selection in:	10.2022
Core Curriculum started on:	28.11.2022
Core Curriculum completed on:	06.09.2024
Specialization track complete on:	in progress

I, Daniel Hadley, Pedagogy Lead of 42 Berlin, certify that the above-named student has met academic requirements as of the date issued. This transcript is issued upon request for all official purposes.

Core Curriculum

Name	Details	Grade*	Workload
Rank 0			
Libft	Reimplementation of key C standard library functions and custom utilities.	125	70 H
Rank 1			
ft_printf	Custom printf using variadic functions and format specifiers in C.	100	70 H
Born2beroot	Introduction to system administration and virtualization with Linux.	100	40 H
get_next_line	Read file or input content line by line with buffer management in C.	104	70 H
Rank 2			
FdF	3D wireframe rendering using a basic graphics window and event handling in C.	111	60 H
push_swap	Sort a stack with a minimal set of operations using sorting algorithms in C.	86	60 H
minitalk	Exchange messages between processes via UNIX signals in C.	106	50 H
Rank 3			
minishell	Build a simple shell handling commands, paths, and env variables in C.	100	210 H
Philosophers	Learn concurrency using threads and mutexes in the dining problem in C.	100	70 H
Rank 4			
cub3d	Raycasting-based 3D maze viewer inspired by 90s FPS games in C.	125	280 H
NetPractice	Configure IP routing and subnetting to build functional network connections.	100	50 H
CPP Module 00	Understand C++ basics vs C: namespaces, classes, stdlib, and intro to OOP.	80	22 H
CPP Module 01	Study memory allocation, references, and member pointers in C++.	90	12 H
CPP Module 02	Explore polymorphism, function overloading, and canonical form in C++.	80	12 H
CPP Module 03	Learn inheritance principles and how to extend class behavior in C++.	80	12 H
CPP Module 04	Use abstract classes, interfaces, and subtype polymorphism in C++.	80	12 H
Rank 5			
CPP Module 05	Handle exceptions with try/catch and understand error management in C++.	100	25 H
CPP Module 06	Apply static, dynamic, const, and reinterpret casts properly in C++.	100	25 H
CPP Module 07	Learn to write and use generic functions and classes with templates in C++.	100	25 H
CPP Module 08	Use STL-style containers, iterators, and algorithms via templates in C++.	100	25 H
CPP Module 09	Deepen understanding of STL containers like vector, map, set, and deque.	90	40 H
ft_irc	Develop a fully functional IRC server using C++.	125	175 H
Inception	Learn system administration fundamentals by virtualizing multiple Docker images.	100	210 H
Rank 6			
transcendence	Build and manage a full-stack web application from scratch.	115	245 H

*At 42, project grades are given on a scale from 0 to 100. A grade of 100 reflects full mastery of the project's objectives. Exceptional submissions may receive a bonus, resulting in grades over 100. All evaluations are peer-reviewed and follow strict assessment criteria to ensure fairness and consistency.

Specialization track

Name	Details	Grade*	Workload
Algo & AI & Data			
Data Science 0	Fundamentals of database creation and management for data science tasks.	100	7 H
Data Science 1	Principles and methods for building and maintaining a data warehouse.	100	7 H
Devops			
cloud-1	Introduction to cloud server concepts and deployment techniques.	100	100 H
InceptThings	Set up Kubernetes clusters and CI pipelines for Dockerized apps.	100	200 H
Development			
avaj-launcher	Implement a Java program following a UML class diagram.	125	50 H

Details of the Curriculum

Founded in 2013, 42 is a global network of ICT schools providing scalable, high-quality software engineering education. Our innovative model emphasizes peer-to-peer learning, project-based and hands-on programming, enabling students to become industry-ready within 2 to 5 years. The curriculum is divided into two parts: the Core Curriculum, after which students may either continue to the Advanced Curriculum or graduate as alumni.

Skills developed during the entire Core Curriculum:

Algorithms & AI: Classic algorithms, data structures, and asynchronous logic.

Graphics: Image manipulation, drawing shapes, and event-driven programming.

Group & Interpersonal: Teamwork, collaboration, and group dynamics.

Imperative Programming: C programming, memory management, and data structures.

Object-Oriented Programming: C++ classes, inheritance, templates, and abstraction.

System Programming: Unix system calls, file handling, and process control.

Network & Sysadmin: Linux system setup, user management, and basic network services.

Web: Full-stack web development, MVC, and UI/UX basics.

Skills developed during the Specialization track:

Algorithms & AI: Machine learning and data processing techniques.

DevOps: CI/CD pipelines, automated deployments, containerization, infrastructure as code.

Development: Modular, tested, maintainable software solutions.
